## ABOUT ME

I have just graduated from Computer Science at the Alexandru Ioan Cuza University in Iasi (UAIC) and I am eager to join a team for the long term where I can initiate my journey in programming and develop my skills.

# EDUCATION

**FACULTY OF COMPUTER SCIENCE, AL. I. CUZA UNIVERSITY**

2021 - 2024

- **Bachelor degree**

**"Emil Racoviță" Theoretical High School**

2017 - 2021

## COURSES

- Laravel PHP Framework Course
- Centric Express 2024 – Session 2: .NET
- C++ Programming – From Beginner to Beyond

## SKILLS

- Laravel
- PHP
- JavaScript
- Python
- HTML & CSS
- OOP & Data structures
- C/C++
- Critical Thinking
- Teamwork

# CERNAT GEORGE LUCIAN

## PROJECTS

### "Trivia"- using JavaScript, Python, HTML & CSS
Bachelor's thesis project

It is a web application that involves the use of HTML & CSS, Bootstrap and JavaScript, AJAX, Web Sockets for client synchronization on the frontend. On the backend, the Python language was used along with the Flask framework.
Trivia is an application where users can participate in real-time online general knowledge games by answering questions from various categories.

### "MyInsta" - using Laravel PHP framework

In this personal project, I developed a clone of the "Instagram" application from scratch using the Laravel PHP framework. "MyInsta" includes all the core functionalities of Instagram, such as creating and editing profiles, following and unfollowing other users, and a feed section where posts appear. Additionally, the application supports photo uploads, likes, comments, and notifications, providing a comprehensive social media experience.

### "PropertyPro" - team project using ASP .Net

This project was developed by a team of four as part of the Introduction to .NET course. My work focused on the property management features, including displaying and storing property details such as names, descriptions, locations, prices and other details related. I was responsible for both the backend and frontend implementation of these features.

### "Zoo Web Manager" - team project using PHP

I took part in a team of three developing this web application. I played a crucial role, working across all areas of the project. I served both as the project manager and a developer. It was implemented using HTML, CSS, PHP, and PostgreSQL. The application features multi-criteria search and filtering capabilities, REST/GraphQL API. This data is updated in real-time through web scraping.
